INTRODUCTION

Background:

You've just arrived on campus at your university, excited to begin your new career as a college student and ready to learn. But it turns out it's not that simple! College is more complicated than you thought it would be, and you need to figure out how to survive it. Use the clues provided to get to your classes, handle your coursework, and prepare yourself for next semester!

Everyone said college would be harder than high school, but no one said it would be so difficult to survive! Can you use your problem solving skills to navigate your university and get yourself through the year?

How to Play:

Work with your team to solve the puzzles that will help you get through your first year at university. Each puzzle will challenge you to use deductive logic, and the correct answers will correspond with locks in the room to get you to the next puzzle. Use the final code to get yourselves out of the room and through that first year of college.

Your team will have 60 minutes to complete all of the puzzles and get out of the room. You can request hints 2 times without it impacting your time; every additional hint after 2 will deduct 2 minutes from the remaining time allotted

Rules:
- Don't destroy anything
- No cell phones or outside help
- Work together as a team!
